

California Energy Commission 2013 Building Energy Efficiency Standards Approved Computer Compliance Programs Temporary Work-Arounds

<u>Software Type</u>	<u>Issue</u>	<u>Work-Around</u>
Residential	The software cannot model a separate hydronic heating system. It can model a combined hydronic heating system (combined hydronic heating is not used in industry as often as separate hydronic heating).	Model the water heater for the hydronic heating system and the water heating device. The report will indicate a combined hydronic system, but it is a separate hydronic heating system.
Residential	The software cannot model single family homes that are taller than three stories.	Model these buildings as three stories. Please see the frequently asked questions (FAQs) at: http://www.energysoft.com/faqs/ .
Residential	The software does not recognize that an addition to the rear of a house does not have a common interior surface.	Include a small interior wall showing a connection to the existing building, or model as an addition alone.
